

# Floating Stairs

## FIRST IN EUROPE

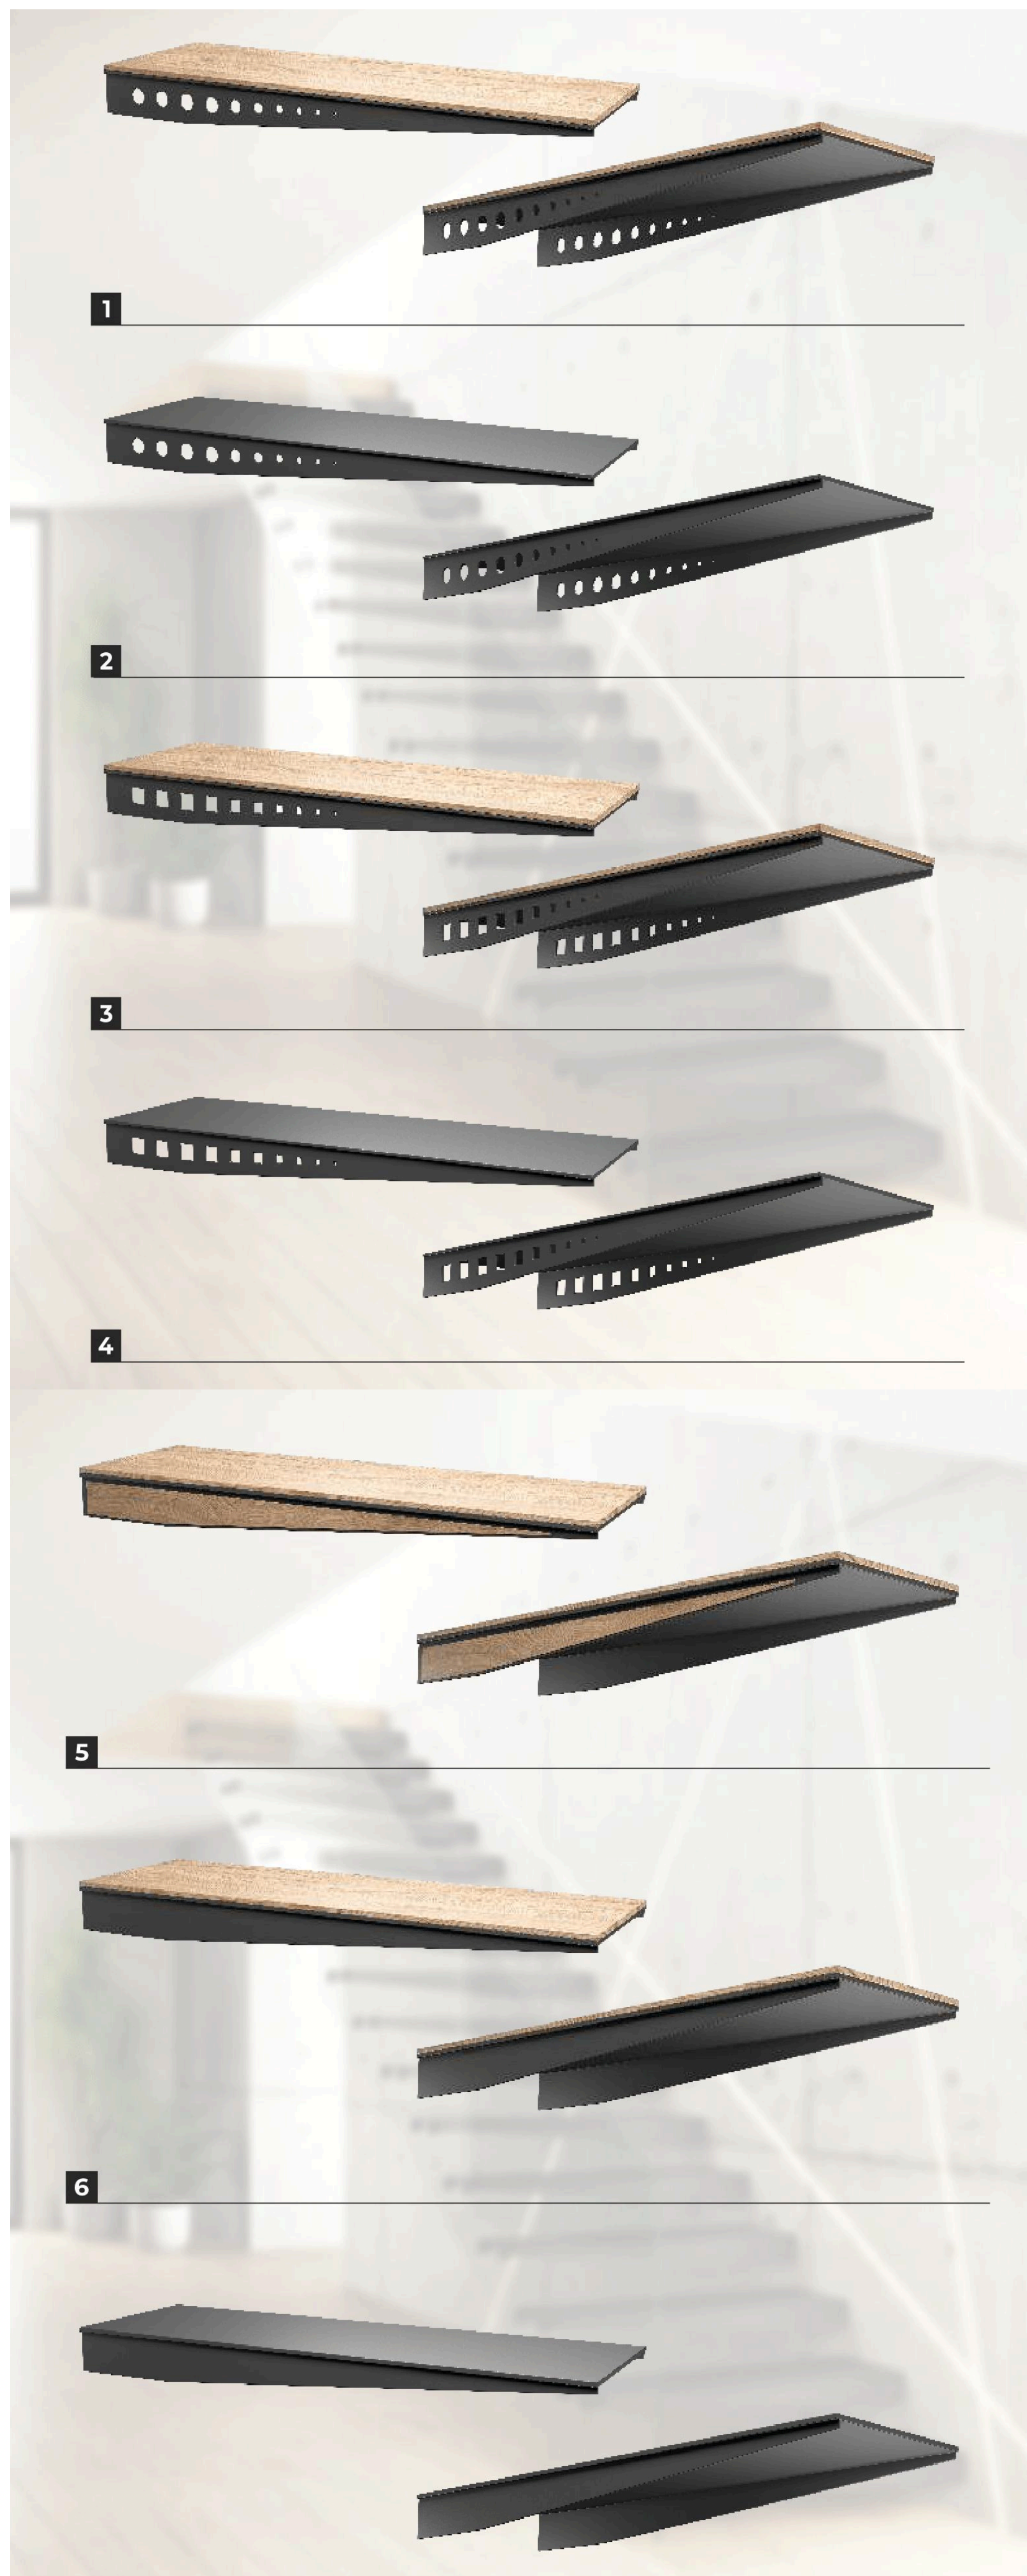

In 2021, a groundbreaking type of cantilever stair was introduced to the European Union market. This innovative design represents a significant advancement in stair technology and has been officially registered with the European Union Intellectual Property Office (EUIPO).

## SAFE TO USE

Thanks to the use of appropriate steel grades, the stairs can withstand significant loads.

## MINIMALIST DESIGN

Our minimalist stair designs emphasize clean lines and uncluttered elegance, creating a seamless and modern aesthetic that complements any contemporary space.

## VERSALITY

They can be installed in a number of different ways, which allows them to fit in a wide variety of spaces and room sizes.

- Straight or standard
- L-shaped stairs
- Spiral staircases
- U-shaped stairs

## INSTALLATION

The stairs are designed for installation in walls made from commonly used building materials with a minimum thickness of 240mm. For walls made of B25 concrete, the required thickness is 200mm.

The installation method depends on the type of material used for the wall. The stairs are coated with a high-wear-resistant paint or a textured paint, plus an anti-slip strip. Wooden stair treads are made from solid glued oak or ash. The wood surface is protected with premium SAICOS hard wax oil. Anti-slip class R9.

WOODEN STAIRS

Our wood elements are available in a stunning array of 29 colors, each enriched with natural oils that enhance the wood’s inherent beauty while providing lasting protection. These samplers offer a rich palette, allowing you to select the perfect shade to complement your design vision and bring a touch of personalized elegance to your space.
